| <p>国立循環器病研究センター人工臓器部では、重症心不全患者の救命に用いられる人工心臓をはじめ、循環および呼吸補助デバイスの研究開発、臨床応用、さらにこれらのデバイスを用いた際に生じる無拍動流循環や心肺バイパス循環などの人工循環に関する病態生理学的研究などを行っています。1980年代に日本で初めて体外設置型の補助人工心臓を開発・実用化したことを皮切りに、長期使用可能な人工肺および心肺補助装置、可搬型補助人工心臓駆動装置、そして、現在医師主導臨床治験実施中の長期使用可能な連続流補助人工心臓システムなど、数多くの研究開発の成果を実用化し、機械的補助循環法の発展に貢献してきました。</p> <p>人工臓器部では、より高いQOLの実現、より広範囲の治療に貢献できる優れた人工臓器の実用化をめざして、医工連携・産学連携体制の下で研究開発を進めています。開発にあたっては、機器本体の開発に留まらず、人工臓器の性能試験に必要な装置の開発、装着患者に与える生理学的影響や運用方法などについての研究も行っています。また、クラス4に分類されるハイリスク医療機器開発ではアカデミア初となるISO13485承認を取得するなど、医療機器開発に要求されるQMSを整備することによって研究成果がいち早く実用化されるために必要な体制を構築しています。</p> |                                                                                                                                                                                                  |                                                   |
| 著 者                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 研 究 業 績                                                                                                                                                                                          | 掲載雑誌・巻・号・頁等                                       |
